SUMMARY

Responsible AI researcher, experienced in HCI experiments, statistical modeling, and building AI interfaces to deliver actionable insights

EDUCATION

Indiana University Bloomington

Expected Graduation: December 2025

Ph.D. in Computer Science

WORK EXPERIENCE

Indiana University Privacy Lab

August 2019 - Present

Research Assistant

- Spearheaded evaluation of conversational AI persuasiveness to uncover anthropomorphic vocal tones' impact on consumer engagement, demonstrating 18% improvement in persuasiveness metrics
- Directed user-centered Explainable AI research analyzing user data on explanation usability, uncovering 15% reduction in user acceptance with lengthy explanations through **mixed-methods analysis**
- Led cross-functional research teams in executing 4+ data-intensive projects, supervising data analysis teams in methodology design, data validation, and quality assurance protocols
- Streamlined **survey design** processes through **AI integration**, reducing survey launch time by 70% and accelerating project reporting timelines by 50% for subsequent quantitative research
- Customized Language Learning: Developed a gamified language learning assistant with conversational correction and reward model by **fine-tuning** a pretrained T5 model using **LoRA**, achieving an **improved BLEU score of 31** through refined tokenization

Idaho National Lab

June 2023 - August 2023

Machine Learning Intern

- Developed an explainable AI interface to integrate **advanced data visualization** for complex machine learning outcomes and user data analysis demonstrated significantly improved operator satisfaction (23%) and perceived ease of use (14%)

Field Information Solutions GmbH

2017 - 2019

Data Analyst & Software Engineer

- Built an Android SQL library for a SaaS application, reducing data retrieval latency by 35% and enabling offline data access for 3,000+ end users [**Playstore**]
- Led the development of **supervised regression models** to predict product sales patterns across 24-month transaction datasets, improving product demand forecast accuracy by 24% for micro organizations
- Implemented unsupervised **k-means clustering algorithms** for urban shop segmentation, applying Principal Component Analysis (PCA) to reduce data dimensionality

TECHNICAL SKILLS

Languages and Frameworks Python (Pandas, NumPy, Scikit-learn), R, SQL, JavaScript

ML & NLP CNN, LSTM, Hugging Face Transformers, LLM Fine-tuning, RAG

Statistical Analyses Multivariate Analyses, ANOVA, T-test, Regression, Mixed Effect Model

Other NoSQL, Tableau, Git, Excel, PowerPoint, Word

SELECTED PUBLICATIONS

Recovering Trust Erosion in AI-assisted Devices

ACM FAccT 2025

Persuasiveness of Voice Assistant's Vocal Tones (**Best Paper Award**)

ACM CUI 2024

Improving Privacy with Decaying Photos

ACM CSCW 2022
